EDUCATION

University of California, Los Angeles Master of Quantitative Economics	Expected Jun 2027
University of California, Santa Barbara B.A. Economics	Jun 2026

EXPERIENCE

Growth & Strategy Intern Mutuals.ai Built market, monetization, and campus-expansion analyses for a social platform with 2,000+ downloads, 1,000+ monthly active users, and 75% Day-7 retention; translated findings into go-to-market and revenue scenarios.	Jun 2026 - Present
--	--------------------

Energy Infrastructure Strategy Volunteer Scale Microgrids Developed workforce and community-engagement plans for a California Energy Commission-funded resilience hub and microgrid project, incorporating local hiring, union, and priority-community requirements.	Jun 2026 - Present
---	--------------------

Financial Services Intern RMR Wealth Builders <i>Montclair, NJ Hybrid</i> - Supported portfolio and trading operations across client accounts, including rebalancing, cash raising, model implementation, performance tracking, and comparative portfolio analysis. - Reconciled account, performance, billing, and AUM data across Black Diamond, Wealthscape, Salesforce, YCharts, and Excel to support advisor decisions and quarterly reporting.	Jun 2025 - Present
--	--------------------

Founder & CEO Malibu Delivery <i>Malibu, CA</i> - Founded and scaled a delivery and logistics business to \$100K+ in 2025 revenue with five employees; owned pricing, hiring, operations, and customer fulfillment. - Improved unit economics through dynamic pricing, order batching, and cost control under variable demand.	May 2022 - Present
--	--------------------

RESEARCH

Independent Researcher UCSB - Prof. Ted Bergstrom - Developed a regional competitiveness model for AI data center investment using electricity prices, grid capacity, land, permitting risk, policy incentives, and infrastructure readiness. - Applied statistical scoring and sensitivity analysis to rank U.S. regions under alternative market and policy assumptions.	May 2026 - Present
---	--------------------

Independent Researcher UCSB - Prof. Richard Startz - Modeled AI data center electricity demand, carbon intensity, and capital allocation using sensitivity analysis and a 10,000-draw Monte Carlo simulation. - Compared subsidies, carbon taxes, clean-energy mandates, and dynamic pricing using cost, emissions, and feasibility metrics.	Sep 2025 - May 2026
---	---------------------

PROJECTS

Util | *Compute Cost & Carbon Optimization Platform* | [GitHub](#) | [Demo](#)

- Lead a four-person, UCSB-funded team building a Python decision-support platform that schedules compute against electricity-price and grid-carbon forecasts under power, deadline, and workload constraints.
- Designed deadline-aware cost, carbon, and weighted optimization with flexible and continuous-run modes; integrated WattTime data, baseline comparisons, multi-location analysis, and exportable schedules.

AI Data Ingestion & Enrichment System | *Python Automation Pipeline* | [GitHub](#)

- Built an autonomous pipeline that parses and classifies missing catalog data, then routes enrichment across manufacturer websites, web search, AI phone calls, and supplier email outreach.

SKILLS & CERTIFICATIONS

Tools: Python, SQL, Power BI, Excel, Stata, AWS, pandas, NumPy, Streamlit | Optimization, Monte Carlo simulation, forecasting, sensitivity analysis, cloud economics

Certifications: AWS Certified Solutions Architect - Associate | FinOps Certified Practitioner | Series 65
