Education

9/2024-Current, University of California, Santa Barbara - B.A. Economics

- **Relevant coursework:** Econometrics, Microeconomic + Macroeconomic Theory, Economic Development

9/2026-6/2027, University of California, Los Angeles - Master of Quantitative Economics

Professional Experience

06/2025 - Current - Financial Service Intern (Hybrid, Remote + In-Person)

RMR Wealth Builders, Montclair, New Jersey

- Supported portfolio management and trading operations across client accounts, including rebalancing, account maintenance, performance tracking, and comparative portfolio analysis using benchmarks and competitor models
- Worked with large financial datasets across Black Diamond, Excel, YCharts, Salesforce, and Wealthscape to maintain data integrity, support reporting, and inform advisor decision-making
- Contributed to billing and revenue operations tied to AUM-based pricing, account classifications, and quarterly billing workflows

05/2022 - Current - Malibu Delivery - CEO

- Managed a delivery and logistics business, overseeing pricing, employees, and customer fulfillment
- Optimized unit economics through pricing strategy, batching, and cost control under variable demand
- 5 employees (both part time and full time), \$100k+ in revenue for 2025

Research Experience

09/2025 - Current - Independent Research Project (UCSB, Prof. Startz)

- Built a quantitative model of AI-related data center electricity demand, carbon intensity, and capital allocation tradeoffs using the framework $E = Y \times C$
- Evaluated subsidies, carbon taxes, clean energy mandates, and dynamic pricing using cost-effectiveness, feasibility, and emissions outcomes
- Implemented the research into a structured Python simulation model with deterministic, sensitivity, and 10,000-draw Monte Carlo analysis
- Assessed policies using expected value, downside risk, and cost-per-ton volatility under uncertainty

Teaching Experience

09/2025 - Current - Undergraduate Teaching Assistant - Game Theory

- Supported students in quantitative modeling, equilibrium analysis, and problem-solving

Projects

Util - Infrastructure Optimization Platform (ML, AI, AWS) - Demo: <https://util-ten-delta.vercel.app/>

- Leading 4 person team in development of a platform for optimizing compute deployment across energy pricing, carbon emissions, and infrastructure constraints for use in decision-making
- Incorporates location-based pricing and deployment tradeoffs into models for compute-intensive workloads

AI Data Ingestion & Enrichment System - AI Automation tool that searches, calls and emails for data collection

- Built an autonomous data pipeline that transforms unstructured product receipts into structured datasets through parsing, classification, and multi-source enrichment
- Developed intelligent routing logic to dynamically select data sources (searching manufacturer sites, using AI to call distributors, email supplier outreach) to resolve missing information

Skills/Certifications

- Python, SQL, Excel, AWS Cloud, Stata | Monte Carlo Simulation, Risk Analysis, Cost Optimization
- Series 65 Certification | FinOps Certified Practitioner | Claude Code in Action
